

Navneet Kumar

Senior Software Engineer | Java, Distributed Systems, Cloud Platforms

nitume00@gmail.com | +91 85271 47218 | linkedin.com/in/navneet-kumar-96120763 | github.com/nitume00

SUMMARY

Senior software engineer with 9 years in Java and Spring Boot, building distributed backend systems across contact center, investment management, digital banking and payments, and biometric identity platforms. Designs microservices on Kubernetes and AWS with gRPC, Kafka, and Redis, owning features from system design through code review, testing, and production support. Has led a team of 5 engineers.

TECHNICAL SKILLS

Languages	Java (8, 11, 17, 21), SQL, TypeScript, JavaScript
Backend	Spring Boot, Spring MVC, Microservices, REST, gRPC, Protocol Buffers, HTTP/2
Fundamentals	Data Structures and Algorithms, Multithreading and Concurrency, Object-Oriented Design
Data and Messaging	Apache Kafka, Redis, MongoDB, MySQL
Cloud and DevOps	AWS, Kubernetes, Docker, CI/CD, Oracle WebLogic
Frontend	Angular, TypeScript, RxJS
Architecture	Distributed Systems, Event-Driven Architecture, High Availability, Caching, Database Sharding, SOLID, Design Patterns, Observability
Testing and Quality	JUnit, Mockito, SonarQube, TDD, Code Review
Tools	Git, Maven, Argo CD, Jira, Confluence, AI-assisted development (Claude)

EXPERIENCE

Senior Software Engineer | Miratech (Client: Five9) — Remote **Nov 2025 – Present**

- Designed and built cloud microservices and APIs powering Five9's omnichannel contact center platform, serving real-time voice, digital messaging, and AI-driven customer interactions for enterprise contact centers
- Built high-availability Java and Spring Boot services on distributed Kubernetes infrastructure, using bounded thread pools, asynchronous processing, and indexed data models to hold latency stable under production traffic
- Instrumented services with structured logging, metrics, and distributed tracing, giving on-call engineers request-level traces to isolate failures across service boundaries
- Reviewed merge requests and led design discussions with product, QA, and SRE teams, standardizing API contracts, error handling, logging patterns, and release criteria across services

Technologies: Java 17 and 21, Spring Boot, gRPC, REST, Kafka, Redis, MongoDB, Kubernetes, AWS, CI/CD

Senior Software Engineer | Miratech (Client: BlackRock) — Remote **Aug 2022 – Nov 2025**

- Developed backend services for Astra, BlackRock's investment management platform, processing portfolio and market data for institutional asset-management workflows
- Built gRPC and Protocol Buffers APIs over HTTP/2 on latency-sensitive paths, replacing JSON over HTTP/1.1 with binary messages multiplexed on a single connection
- Raised unit-test coverage to 95% with JUnit, Mockito, and SonarQube quality gates, cutting defects reaching QA
- Introduced multithreaded processing for independent portfolio computations and refactored core modules against SOLID principles, replacing sequential passes with parallel execution
- Implemented Redis caching in the API tier for frequently requested reference data, serving repeat reads from cache instead of round-tripping to downstream services
- Built Kafka event pipelines that moved Astra from synchronous request flows to an event-driven model, decoupling producers from downstream consumers

Technologies: Java 17, Spring Boot, gRPC, Protocol Buffers, HTTP/2, Kafka, Redis, Angular, JUnit, Mockito, SonarQube

Senior Software Engineer | PureSoftware — Noida, India

Dec 2020 – Aug 2022

- Led a team of 5 engineers on Artha, a digital banking and payments platform, owning technical direction for modules covering customer onboarding, account servicing, and payment transaction flows
- Designed a Spring Boot and Java 8 microservices solution with established design patterns, breaking a tightly coupled core banking application into independently deployable onboarding, account, and payment services
- Authored high-level and low-level designs on Confluence covering caching strategy, database sharding for growing transaction history, and service decomposition of the payments core
- Built shared Angular components consumed by multiple development teams across the banking portal, standardizing frontend patterns and removing duplicated UI code
- Mentored junior engineers on design patterns and testing practices for payment transaction flows

Technologies: Java 8, Spring Boot, Microservices, Angular, MySQL, Redis, Confluence

Software Engineer | IDEMIA — Noida, India

Nov 2018 – Dec 2020

- Developed Java services for face and iris recognition security systems used in identity verification programs, handling sensitive biometric data under client security requirements
- Translated client-side requirements into technical designs and delivered Java features across offshore, SIT, and UAT environments, deploying WAR releases on Oracle WebLogic Server
- Resolved defects surfaced during unit testing, system integration, and user acceptance phases, and supported production issues directly with client stakeholders

Technologies: Java, Oracle WebLogic, JUnit, SQL

Software Engineer | Bureau Veritas — Noida, India

Oct 2016 – Nov 2018

- Built Java features for BvLabNg, Bureau Veritas's laboratory testing and certification platform supporting sample analysis and compliance reporting workflows
- Analyzed existing modules and workflows to identify optimization opportunities, refactoring them to remove duplicated logic and redundant database calls
- Deployed WAR releases to Oracle WebLogic Server across offshore, SIT, and UAT environments and resolved defects through unit, integration, and acceptance testing cycles

Technologies: Java, Oracle WebLogic, SQL

EDUCATION

Master of Computer Applications (MCA) | Maharshi Dayanand University, Rohtak

2015

Bachelor of Computer Applications (BCA) | Maharshi Dayanand University, Rohtak

2009
